THE WORK OF
L&J.G. STICKLEY
FAYETTEVILLE, NEW YORK
HE numerous pieces that furnish your house—the Chairs, the Tables, the oaken Settles, Sideboards and all the others—are undoubtedly THINGS! Yes, but if you choose each piece with due regard to your individual needs and preferences, if you carefully create an environment of furniture; each piece of it then becomes, not a THING, but an undeniable part of yourself!

**Individuality**

L. & J. G. Stickley, makers of the simple and entirely American type of furniture that bears their impress, are working for individuals. Each year sees many new designs taking shapes of wood and leather in their shops, built, every one of them, to take an intimate place in some household or to serve someone in a public building; skilfully contrived, that is, to fit an individual need.

**Harmony**

You demand in your house, in your office or in your public building, a certain well-defined harmony. Wall treatment, floors, furniture, must all harmonize in color and pattern, must bear a subtle relationship to each other. In response to this demand of yours for harmony, the furniture illustrated in this little book is planned and fashioned to fit into your scheme, whatever that may be.

**Woods**

White oak, the wood chiefly used, is selected not only for strength and durability, but on account of a capacity for taking on various shades and tones of color.

**Design**

This oak, cut in the forests of Kentucky, is built into furniture strong and durable, though not over heavy, suitable for your office, bank, or for the more formal rooms of your house; or slighter shapes are wrought from the oak, showing in their details graceful curves and variations of surface, perhaps bits of inlay in the same wood; or again the oak is turned into a little masterpiece of downright invention, as for instance the Davenport bed No. 285 on pages 28 and 29, an invention that makes for your comfort.
Finishes

A design fitted for some particular need of yours decided upon (and there are whole groups of furniture with the same motive running through them, suitable for use together in a room) the question of harmonizing color and finish is developed in the L. & J. G. Stickley Shops. And in this field of endeavor Leopold Stickley, "L" of the firm, one of the well known family of master workers in wood, has through several years of study and experiment arrived at expert knowledge of possible colors and undertones, treating the oak through fuming and staining, producing beauty of color as rich and glowing as that found upon certain old canvases.

Texture

Fumed by ammonia in air-tight compartments, and stained in tones that show beautiful undertints, the furniture is next given, through sanding and waxing, a smooth bloom-like texture, so that the arm or back of your chair is delightful to the touch.

Leathers

In treating the leathers used as covering for chair cushions or table tops, colors harmonizing or contrasting with those of the furniture are obtained, giving the needful accents to your color scheme. Old time methods of tanning are used, and no injurious acids impair the strength of the leather. Goat skins, not long since on their former owners, roaming the meadows of Palestine, thus contribute to the beauty and comfort of your rooms, since the skins used in the Work of L. & J. G. Stickley come from those sections of the Holy Land where the finest goats in the world are grown. Native hides are used for large table tops, and fabrics plain and figured are occasionally employed for cushion coverings.

Metal Work

Where hinges and pulls are needed, as upon chests of drawers and bookcases, these metal fixtures are of copper handwrought in simple designs. The copper is hammered to obtain texture and is dulled and modulated in color by various processes until the soft tones of old metal are secured.
Details of Construction

How your furniture is built is a matter of vital importance to you. Furniture of simple and good construction does not go out of style in a few years, but lasts your lifetime. The Work of L. & J. G. Stickley, built in a scientific manner, does not attempt to follow the traditions of a bygone day. All the resources of modern invention are used as helps in constructing this thoroughly modern product, more suitable, as many notable authorities believe, to the house of to-day—your house, that is—than is the furniture of past centuries or its necessarily machine made reproductions.

If you examine the table legs and those of the large chairs built at the L. & J. G. Stickley Shops, you will find that each side of the post is quarter sawed. If you should investigate further and cut a cross section through the post, you will find that it is not veneered but built of four pieces of solid oak, with a tiny core, all so tightly welded together that no cracking is possible, and the post is practically indestructible, while the fine silver flake of the quartering is seen from any point of view. Table tops, necessarily constructed, in these days of narrow boards, of several pieces of lumber, are fastened together by "splines" or tiny wedges as you see in the drawing or in your table top, so that no splitting is possible, the splines giving an agreeable bit of structural ornament.

Cushions are built on steel and securely fastened to wooden frames. This construction, used in the making of automobile seats, is original in its use for furniture with the Work of L. & J. G. Stickley and has...
in the years since its adoption proved eminently satisfactory. The seat cushions are removable, slipping easily into place; they are exceedingly comfortable, the cushions keep their shape and the leather lasts much longer than in a springless cushion. Back cushions are ventilated through air holes. When pressure is applied to the cushions the air is expelled. When relieved of pressure the cushion becomes filled with air, which penetrates the filling, keeping it well ventilated. Back cushions are kept in place by leather straps, so that they do not annoy you by falling out of place.

Comfort

In these details and in many others care is given to your comfort, as well as to the durability of each piece of furniture. Chairs are studied from the point of view of many different sitters, and are of many sizes and proportions. In planning the height of tables, and especially of desks, an average is not struck. Heights suitable to various individuals are carefully planned.

The Makers Have no Other Occupation

The Work of L. & J. G. Stickley is a product that claims and fills the entire time of its producers, who indulge in no other occupation, rightly thinking that each process, from the proper seasoning of the timber to the exact color to be attained in the finished piece, must be watched to guard against the slightest measure of failure and to secure the greatest possible efficiency of method. Furniture building, it is believed, is in itself an important work, demanding the entire time of the modern craftsmen who attempt it.

At the New York office at 815 Marbridge Building, Herald Square, J. George Stickley, the other member of the firm, has in charge that important branch of the Work, the placing of the finished pieces of furniture in various shops and stores where you may see and buy them. Each piece you may find, in New York or Boston, in Honolulu, South Africa, or any other of the various cities or countries that demand it, has imprinted upon it the device
